Dearest Brian

I want to take this opportunity to share some really good news with you.

I have a 25 year old patient, who has been trying to become pregnant, for several years now. She has had 3 invetral fertilizations, with no success. She has only one fallopian tube (the other was surgically removed) which was blocked, due to a pelvic tilt. She also has only one ovary.

{We fitted her with a pair of Proprioceptive Insoles} After wearing them for one month, her pelvis went back into place, her fallopian tubules unblocked. The outcome is: **this patient is 7 months pregnant today.** This is really exciting news.

Regards,
Dinos Xydas, M.D
Nicosia, Cyprus.
